

24/7 sales – even for age- restricted products

**Secure age, identity, and document verification
for smart store systems.**

With jenID technology, age-restricted products can be sold securely, automatically, and 24/7 in smart stores.

Example smart store environment in collaboration with twenty4U.

Benefits:

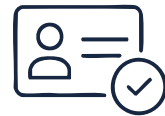

Expanded product range

Seamlessly integrate age-restricted products into your smart store concept.

Unlock additional revenue

Offer high-margin product categories without increasing staffing requirements.

More operational security

Perform age and document verification directly within the self-service process.

The Challenge:

Especially at gas stations, truck stops, and convenience stores, products subject to youth protection regulations are economically significant – yet in unattended retail environments, they present critical process challenges.

Requirements:

- Reliable age verification
- Secure document verification
- Frictionless checkout experience
- No manual approval process

The Solution:

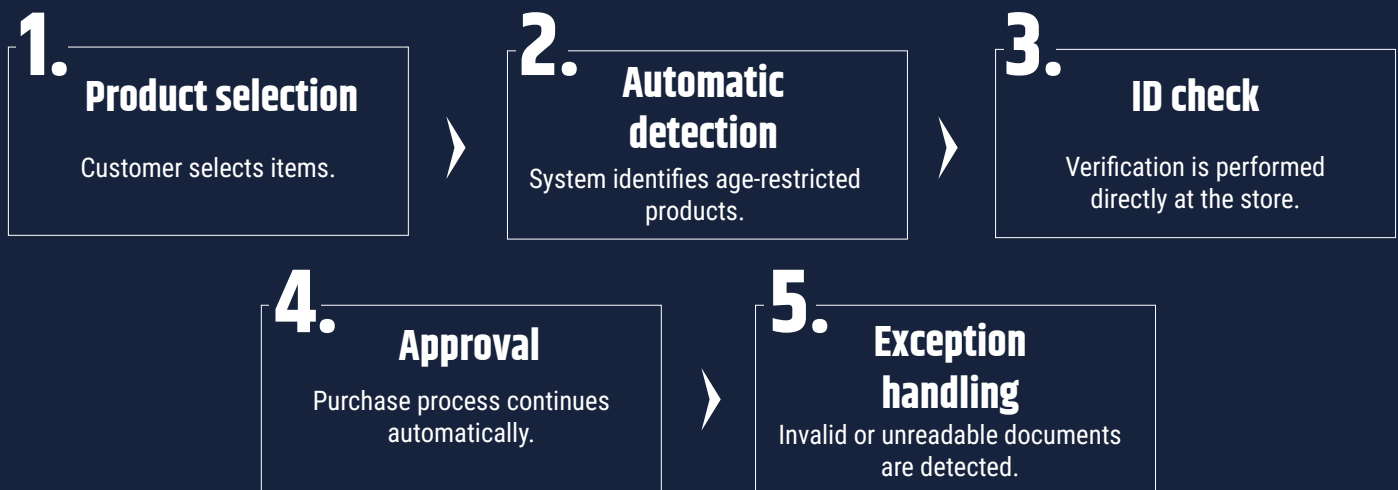

jenID integrates age verification into existing smart store architectures via API / SDK.

As soon as an age-restricted product is detected, verification starts automatically. The check is performed directly at the terminal using an ID document or driver's license. Additionally, an automated authenticity check is carried out to detect manipulated or invalid documents.

The result:

a secure, automated self-service process.

How It works:

What sets jenID apart:

- Leading specialist in GDPR-compliant, AI-powered identity, age and document verification
- Automated authenticity checks for ID documents
- Global coverage (IDs, driver's licenses, passports)
- Easy integration via API / SDK
- 24/7 cloud-based service
- Data hosting exclusively in Germany
- High text recognition rate (OCR 97.2%)

Benefits for smart store providers:

- Seamless integration
- Support for legally compliant 24/7 concepts
- Secure sale of age-restricted products
- Built-in document authenticity verification
- Scalable across systems and locations

Solution partners:

JenID Solutions

jenID Solutions

Technology partner for digital identity, age and document verification

HID

Technology partner for secure identity capture.

Proven in practice:

jenID's verification technology is already in use in real smart store environments. In collaboration with twenty4U, it enables the secure and automated sale of age-restricted products in 24/7 operations – fully integrated into the self-service process.

Discover how secure age verification can be seamlessly integrated into your smart store or convenience concept.
